To whom this may concern,

I fully support the unlicensed use of the 3650-3700 MHz band. I am a WISP located in New Orleans,La. There are over 4 WISP's operating here and the spectrum we have to share here is very congested. Our clients are apprx. 65% residential and 35% commercial. Our clients at present enjoy being able to have a choice in their data delivery. Our churn rate is extremely small compared to dsl and cable because we can offer personal service and that's what keeps our clients happy. Recently, I got a call from a 8 story office building that is located in the middle of New Orleans. The owner found it impossible to believe that dsl or cable would not bring data to his building. We had a 3 meg pipe there in a matter of 2 days at no charge to the owner. Now the tenants are able to get high speed internet. We had to make a 7 mile shot to do this and there was only 1 channel in the 5.3-5.8 spectrum that was clear. Without this channel we would not have been able to deliver to this building. Please allow us to use this new spectrum to continue to do projects such as this. BTW, the address for the record to this building is 4948 Chef Menteur Hwy. New Orleans,La.70126. The owner is Reggie Winfield. 504-821-2001
